

Elemental Equity

Certificate Of Investment

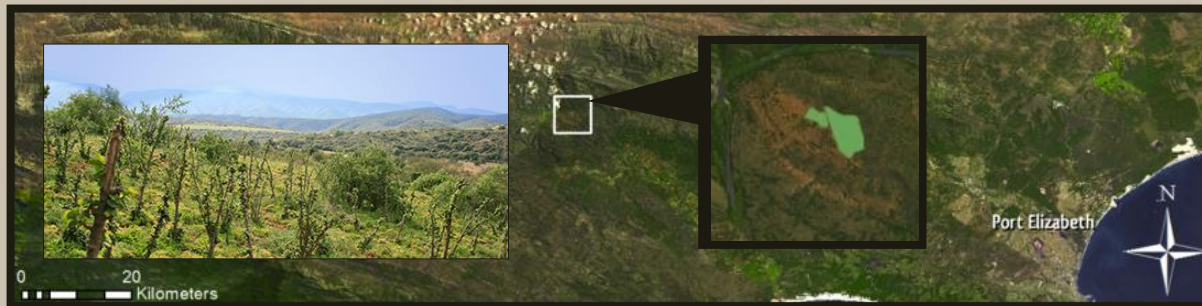

Dear Student Conference for Conservation

Thanks for your contribution to plant Spekboom through the Elemental Equity fund.

The investment has resulted in the planting of the carbon-thirsty "Spekboom" (*Portulacaria afra*) in the unique Baviaanskloof Mega-Reserve, South Africa.

As a result of ecosystem restoration, through the planting of the native Spekboom, carbon dioxide (CO₂) will be captured and sequestered in plant biomass, litter and soil. This helps to regulate our climate, reduces soil erosion, and helps to rehabilitate degraded and deforested sub-tropical thicket landscapes.

Please find below the map of the planting site: "Goedehoop" in the Baviaanskloof Nature Reserve, South Africa. The donation is part of a larger planting site of 10 ha. More details can be found on the right

About Your Investment

Element: Air

Investment:	12 500.00 ZAR
Area Planted:	1.00 ha
Spekboom Planted:	2500
Working days:	120
Carbon capture	72 ton*

* expected, *not guaranteed*, carbon capture in 30 years

Thank you for employing the local community of Cambria.
